

28th April 2008

Amur Minerals Corporation (AIM: AMC)
("Amur" or "the Company")

Initial permitting for Kun-Manie completed

Amur Minerals Corporation (AIM: AMC), an exploration and development company focused on East Russia, announces that the Russian State Committee on Reserves (GKZ) has approved the first of a series of filings. This will lead to a mining permit for areas containing drilled reserves of the Kun-Manie project.

In December 2007, the Company filed a Russian pre-feasibility report prepared by SibTsvetMetNiiProject of Krasnoyarsk with the GKZ. This sets the cutoff grade for future reserve submissions and mine permitting at 0.2% Ni. At a hearing on 23 April 2008, a committee of experts appointed by the GKZ to review the submission approved the report. The minutes of this committee meeting will be published in due course.

The Company can now submit a reserve estimate prepared to Russian standards for C1 and C2 reserves on the Maly Krumkon, Vodorazdelny and Ikenskoe deposits within the Kun-Manie exploration licence.

Upon a favourable review by a committee of experts appointed by the GKZ, the Company's Russian subsidiary will receive a certificate of discovery granting it the exclusive right to negotiate a 20 year mining permit in these areas.

Robin Young, CEO of Amur Minerals said, "We have successfully completed the first stage to bring Kun-Manie to fruition. We expect the mining licence to be granted in due course as we work our way through the Russian Federation's licensing system. The Russian prefeasibility study has shown that Kun Manie is economic at the current resource level, which we expect to significantly improve with new drilling planned for this next year."
